

Deer – HD 411

Draft Changes for 2022-2023 Hunting Regulations:

- Eliminate 497-00 white-tailed deer B license

Biological Implications:

No biological justification behind this change; removal of the 497-00 white-tailed deer B license/permit type (LPT) may result in fewer antlerless white-tailed deer harvested in HD 411 (i.e., from 2016-2020, an average 81 white-tailed deer were harvested annually in HD 411 on this LPT).

Social Implications:

Public comment pending regarding these possible changes. The removal of the 497-00 white-tailed deer B license is primarily to simplify regulations by reducing the number of LPTs. It will reduce opportunity for some sportsmen and women to harvest antlerless white-tailed deer in HD 411. There will still be opportunity to do so via the 004-00 region-wide white-tailed deer B license and a general license.
