

Deer – HD 417

Draft Changes for 2022-2023 Hunting Regulations:

- **Boundary change:**
 - The Judith Mountains portion of HD 412 would be absorbed into HD 417
 - The portion of HD 426 north/east of PN Bridge Road to Stafford Ferry Road would become part of HD 417

Biological Implications:

The biological justification behind the possible boundary change among HDs 412, 417, and 426 is related mainly to elk; deer HD boundary would change by default and this boundary change would have no positive or negative impact on mule or white-tailed deer.

Social Implications:

Public comment pending regarding these possible changes. Boundary change is to reduce the number of HDs and license/permit types (LPTs) to simplify regulations.
