

MONTANA DEPARTMENT OF FISH, WILDLIFE AND PARKS
FISHERIES DIVISION

JOB PROGRESS REPORT

State: MONTANA Project Title: STATEWIDE FISHERIES INVESTIGATION
Project No: F-46-R-5 Study Title: SURVEY AND INVENTORY OF COLDWATER STREAMS
Job. No: I-i Job Title: MID-YELLOWSTONE DRAINAGE INVESTIGATIONS
Project Period: July 1, 1991 - June 30, 1992

OBJECTIVES AND DEGREE OF ATTAINMENT

- 1) To maintain the Region's streambanks and channels in their present or improved condition.

Projects affecting stream habitat were dealt with through the Stream Protection Act of 1963 and the Natural Streambed and Land Preservation Act of 1975.

- 2) To ensure, within hydrologic constraints, that flows in streams supporting fisheries do not fall below minimums identified during the Yellowstone River instream reservation process.

Minimum instream flows determined in the Yellowstone River instream process were protected through Montana Department of Fish, Wildlife and Parks review of new water use permit applications.

- 3) To maintain water quality at or above 1975-85 average levels as measured at U.S. Geological Survey water quality monitoring stations.

Maintaining water quality was dealt with through Montana Department of Fish, Wildlife and Parks review and comment on water discharge permit applications and renewals.

- 4) To maintain fish populations and habitat in streams affected by resource development activity at levels at least as good as present status.

Timber sale plans, grazing allotment management plans, environmental assessments and environmental impact statements are reviewed by the Montana Department of Fish, Wildlife and Parks to maintain fish populations and protect stream habitat. The Boulder River Fisheries Management Plan was completed.

- 5) To reduce impacts on river stability and fish habitat caused by yearly maintenance at headgate structures.

Irrigation projects affecting river stability and fish habitat were dealt with through the Natural Streambed and Land Preservation Act of 1975 and HB661 of 1987.

- 6) To maintain a minimum of 123,000 angler-days per year within the mid-Yellowstone drainage. (State funded)

The fisheries management plan for the Boulder River was completed, and fisheries information necessary for managing the mid-Yellowstone River was collected.

- 7) To redistribute fishing pressure and minimize overcrowding through the purchase of additional access sites in key areas. (These areas include Rock Creek between Roberts and Joliet; Yellowstone River at Big Timber, between Columbus and Reedpoint and between Columbus and Laurel; and on the East and West Rosebud drainages.)

Boat launching facilities and a parking area were completed on the newly acquired Otter Creek Fishing Access Site near Big Timber. A number of other land parcels were investigated but no purchases were completed.

- 8) To maintain riparian and floodplain areas in their natural condition.

Maintaining riparian and floodplain areas in their natural condition was encouraged through Montana Department of Fish, Wildlife and Parks review and comments pertaining to subdivision proposals, Stream Protection Act projects, and Natural Streambed and Land Preservation Act projects.

- 9) To complete cutthroat trout inventory in one drainage of the mid-Yellowstone reach each year beginning in 1989. (State funded)

Additional cutthroat inventory work was completed in Lower Deer Creek. The MDFWP and USFS cooperated in transplanting purestrain Yellowstone cutthroat trout from a downstream section to the headwaters of Lower Deer Creek.

- 10) To complete inventory of cutthroat trout in the three forks of the Boulder drainage: East Fork 1990, West Fork 1991 and Main Boulder 1992 (state funded).

Cutthroat inventory work was completed in the West Boulder River drainage and in the East Fork of the main Boulder River near Independence.

- 11) To increase public awareness of the diversity of opportunities and hazards of water-based recreation on mid-Yellowstone. (State funded)

A bit of river hazards within the region was developed as part of a statewide inventory. Funding for a floater's guide to the mid-Yellowstone River is being pursued through the Fisheries Management Bureau.

- 12) To improve level of understanding among anglers regarding management policies and options, and encourage their participation in the decision-making process.

A number of sports club meetings were attended to answer anglers' questions and explain management policies and options. Fisheries management presentations were made to several groups.

- 13) To protect and maintain rainbow spawning areas in the upper Stillwater River in their present condition.

Several counts were made of rainbow trout using spawning areas in the upper Stillwater River. The Stillwater Mining Company sediment monitoring program is reviewed by the Montana Department of Fish, Wildlife and Parks.

- 14) To maintain cutthroat population numbers in Meatrack Creek at or above 1984 levels.

Montana Department of Fish, Wildlife and Parks assists U.S.F.S. review water quality and turbidity monitoring of grazing impacts in Meatrack Creek.

SUMMARY

Some progress on all objectives was achieved.
