IMPORTANCE OF BULL TROUT

All respondents were asked: "Using a scale of 1 to 5, where 5 is very important and 1 is not at all important, how important do you feel that bull trout are in the scheme of Montana's natural heritage?" With an average rating of 3.6, 54% feel that the bull trout is important (34% rate it as "5"); 20% rate it as average ("3"); and 22% feel that is not important (11% rate it as "1").

The following significant patterns are found with regard to **important** ("4" or "5"):

- 59% of the women rate bull trout as important, as compared with 51% of the men
- People in age group 55-64 are more likely to rate the bull trout as important
- People with incomes under \$20,000 and those with incomes \$40-60,000 are more likely to rate the bull trout as important
- 74% of the people who have lived in the state for less than 20 years rate the bull trout as important, as compared with 49% of those who have lived in the state for 20 years or more
- People who fish are more likely to rate the bull trout as important
- People who are very aware of the bull trout restoration process are more likely to rate the bull trout as important
- People who would like to be on a mailing list are more likely to rate the bull trout as important
- People who would like to participate through a local group are more likely to rate the bull trout as important

The following significant patterns are found with regard to **average** ("3"):

- People in age group 18-34 are more likely to rate this as average
- People who don't fish are more likely to rate this as average

The following significant patterns are found with regard to **not important** ("1" or "2"):

- 27% of the men rate this as not important, as compared with 14% of the women

AGREE-DISAGREE STATEMENTS

All respondents were asked: "I'm going to read you some statements about the bull trout. For each one, please tell me if you agree or disagree with the statement:" and two statements followed.

Bull trout numbers have been declining throughout the state.

Most people -- 73% -- agree with this statement; 8% disagree; and 19% indicate that they don't know.

The following significant patterns are found with regard to **agree**:

- 77% of the men agree with this statement, as compared with 66% of the women
- People with incomes of \$40-60,000 are more likely to agree with this statement
- People who fish are more likely to agree with this statement
- People who feel that the bull trout is important are more likely to agree with this statement
- People who would like to participate through a local group are more likely to agree with this statement

The following significant patterns are found with regard to **disagree**:

- People in age group 35-44 are more likely to disagree with this statement

- People who don't feel that the bull trout is important are more likely to disagree with this statement

The following significant patterns are found with regard to **don't know**:

- Women are more likely to indicate that they don't know
- People who don't fish are more likely to indicate that they don't know
- People who are not aware of the restoration process are more likely to indicate that they don't know

Bull trout require very cold, clean water for spawning

Most people -- 72% -- agree with this statement; 4% disagree; and 24% indicate that they don't know.

The following significant patterns are found with regard to **agree**:

- People in age group 55-64 are more likely to agree with this statement
- As income increases, the percentage who agree with this statement decreases: 83% of the low income agree with it, as compared with 56% of the high income
- People who feel that the bull trout is important are more likely to agree with this statement
- People who are aware of the restoration process are more likely to agree with this statement
- People who would like to be on a mailing list and those who would like to participate through a local group are more likely to agree with this statement

The following significant patterns are found with regard to **disagree**:

- People who feel that the bull trout is not important are more likely to disagree with this statement

The following significant patterns are found with regard to **don't know**:

- People in age group 35-44 are more likely to indicate that they don't know
- People with incomes over \$60,000 are more likely to indicate that they don't know
- People who have lived in Montana for 20 years or more are more likely to indicate that they don't know
- People who feel that bull trout are not important are more likely to indicate that they don't know

THREATS TO BULL TROUT

All respondents were asked: "I'm going to read some possible threats to bull trout. For each one, please tell me if you feel this threat is high, moderate, or low:" and 5 items followed. Most frequently indicated as a high threat are *increased sediment in streams as a result of certain road and land management activities* (45%) and *barriers to migration, such as dams or dewatered streams* (44%).

Interactions with non-native fish such as brook trout and lake trout.

This is indicated as high by 19%; moderate by 22%; low by 20%; as no threat at all by 11%; and 29% indicate that they don't know.

The following significant patterns are found with regard to **high**:

- People in age group 18-44 are more likely to feel that this is high
- People who have lived in the state for less than 20 years are more likely to feel that this is high

- People who feel that bull trout are important are more likely to feel that this is high
- People who are aware of the restoration process are more likely to feel that this is high
- People who would like to participate through a local group are more likely to feel that this is high

The following significant patterns are found with regard to **moderate**:

- People in age group 55-64 are more likely to feel that this is moderate
- People who fish are more likely to feel that this is moderate

The following significant patterns are found with regard to **low**:

- People who rate the bull trout's importance as average are more likely to rate this as low

The following significant patterns are found with regard to **no threat**:

- People in age group 65+ are more likely to indicate that this is no threat at all
- People who feel that the bull trout is not important are more likely to indicate that this is no threat

The following significant patterns are found with regard to **don't know**:

- People in age group 65+ are more likely to indicate that they don't know
- People with incomes over \$60,000 are more likely to indicate that they don't know
- People who have lived in the state for 20 years or more are more likely to indicate that they don't know
- People who don't fish are more likely to indicate that they don't know

Increased sediment in streams as a result of certain road and land management activities.

This is indicated as high by 45%; moderate by 25%; low by 15%; as no threat at all by 8%; and 7% indicate that they don't know.

The following significant patterns are found with regard to **high**:

- People in age group 55-64 are more likely to indicate that this is high
- People with incomes under \$20,000 are more likely to indicate that this is high
- People who have lived in the state for less than 20 years are more likely to feel that this is high
- People who feel that bull trout are important are more likely to feel that this is high
- People who are aware of the restoration process are more likely to feel that this is high
- People who would like to participate through a local group are more likely to feel that this is high

The following significant patterns are found with regard to **moderate**:

- People in age group 18-34 are more likely to feel that this is moderate
- People with incomes of \$20-40,000 are more likely to feel that this is moderate
- People who feel that the bull trout is average are more likely to feel that this is moderate

The following significant patterns are found with regard to **low**:

- People who feel that the bull trout is not important are more likely to feel that this is low

The following significant patterns are found with regard to **no threat**:

- People in age group 65+ are more likely to feel that this is no threat
- People who feel that the bull trout is not important are more likely to feel that this is no threat

The following significant patterns are found with regard to **don't know**: no significant patterns are found

Being trapped in irrigation ditches.

This is indicated as high by 30%; moderate by 22%; low by 28%; as no threat at all by 8%; and 13% indicate that they don't know.

The following significant patterns are found with regard to **high**:

- People in age group 45-54 are more likely to feel that this is high
- People who have lived in the state for less than 20 years are more likely to feel that this is high
- People who feel that the bull trout is important are more likely to feel that this is high
- People who would like to participate through a local group are more likely to feel that this is high

The following significant patterns are found with regard to **moderate**:

- People in age group 55-64 are more likely to feel that this is moderate
- People with incomes under \$20,000 are more likely to feel that this is moderate

The following significant patterns are found with regard to **low**:

- People in age group 18-34 are more likely to feel that this is low
- People with incomes over \$60,000 are more likely to feel that this is low

- People who feel that the bull trout is not important are more likely to feel that this is low

The following significant patterns are found with regard to **no threat**:

- People in age group 65+ are more likely to feel that this is no threat

The following significant patterns are found with regard to **don't know**:

- People in age group 65+ are more likely to indicate that they don't know

Barriers to migration, such as dams or dewatered streams.

This is indicated as high by 44%; moderate by 28%; low by 13%; as no threat at all by 8%; and 8% indicate that they don't know.

The following significant patterns are found with regard to **high**:

- 48% of the men feel that this is high, as compared with 37% of the women
- People in age group 55-64 and those in age group 18-34 are more likely to feel that this is high
- People with incomes of \$40-60,000 are more likely to feel that this is high
- People who have lived in the state for less than 20 years are more likely to feel that this is high
- People who feel that the bull trout is important are more likely to feel that this is high
- People who are aware of the restoration process are more likely to feel that this is high
- People who would like to participate through a local group are more likely to feel that this is high

The following significant patterns are found with regard to **moderate**: no significant patterns are found

The following significant patterns are found with regard to **low**:

- People who feel that the bull trout is not important are more likely to feel that this is low

The following significant patterns are found with regard to **no threat**: no significant patterns are found

The following significant patterns are found with regard to **don't know**: no significant patterns are found

Over-harvest or poaching.

This is indicated as high by 34%; moderate by 30%; low by 20%; as no threat at all by 7%; and 8% indicate that they don't know.

The following significant patterns are found with regard to **high**:

- People in age group 18-34 are more likely to feel that this is high
- People who feel that bull trout are important are more likely to feel that this is high
- People who are aware of the restoration process are more likely to feel that this is high

The following significant patterns are found with regard to **moderate**:

- People in age group 55-64 are more likely to feel that this is moderate

The following significant patterns are found with regard to **low**:

- People who feel that bull trout are not important are more likely to feel that this is low

The following significant patterns are found with regard to **no threat**: no significant patterns are found

The following significant patterns are found with regard to **don't know**: no significant patterns are found

AWARENESS OF STATE'S RESTORATION PROCESS

All respondents were asked: "Using a scale of 1 to 5, where 5 indicates that you are very aware and 1 indicates that you are not at all aware, how would you rate your awareness of the state's bull trout restoration process?" With an average rating of 2.6; 23% feel that they are aware of the process (with 10% rating this as "5"); 32% rate their awareness as average; and 44% are not aware (with 26% rating this as "1").

The following significant patterns are found with regard to **aware** ("4" or "5"):

- Men are more likely to be aware
- People with incomes over \$60,000 are more likely to be aware
- People who have lived in the state for less than 20 years are more likely to be aware
- People who fish are more likely to be aware
- People who are interested in being on a mailing list and those who would like to participate through a local group are more likely to be aware

The following significant patterns are found with regard to **average** ("3"):

- People in age group 55-64 are more likely to rate this as average
- People with incomes of \$20-40,000 are more likely to rate this as average

The following significant patterns are found with regard to **not aware** ("1" or "2"):

- Women are more likely to be not aware
- People in age group 18-34 are more likely to be not aware

- People with incomes under \$20,000 are more likely to be not aware
- People who don't fish are more likely to indicate that they are not aware
- People who feel that bull trout are not important are more likely to indicate that they are not aware

STATE'S EFFORTS

All respondents were asked: "In the state's efforts to protect and restore bull trout, do you feel that the state has done too much, has done the right amount, or has not done enough?" Most frequently people indicate that the state has done the right amount (37%); 26% feel it has not been enough; 16% feel it has been too much; and 20% don't know.

The following significant patterns are found with regard to **right amount**:

- People who have lived in the state for 20 years or more are more likely to feel that this has been the right amount
- People who rate the importance of the bull trout as average are more likely to feel that this has been the right amount
- People who rate their awareness of the restoration process as average are more likely to feel that this has been the right amount

The following significant patterns are found with regard to **not enough**:

- Men are more likely to feel that this has not been enough
- People in age group 55-64 are more likely to feel that this has not been enough
- People who have lived in the state for less than 20 years are more likely to feel that this has not been enough

- People who feel that bull trout are important are more likely to feel that this has not been enough
- People who are aware of the restoration process are more likely to indicate that this has not been enough
- People who would like to be on the mailing list and those who would like to participate through a local group are more likely to indicate that this has not been enough

The following significant patterns are found with regard to **too much**:

- People who fish are more likely to indicate that this has been too much
- People who feel that bull trout are not important are more likely to feel that this has been too much

The following significant patterns are found with regard to **don't know**:

- Women are more likely to indicate that they don't know
- People in age group 18-34 are more likely to indicate that they don't know
- People who don't fish are more likely to indicate that they don't know
- People who are not aware of the restoration process are more likely to indicate that they don't know

MAILING LIST

All respondents were asked: **"Would you like to be on a mailing list to receive more information on the state's bull trout restoration process?"** More than half of the respondents -- 56% -- would like to be on the mailing list.

The following significant patterns are found:

- 61% of the men would like to be on the mailing list, as compared with 48% of the women
- People in age group 35-44 are more likely to want to be on the mailing list
- People who have lived in the state for less than 20 years are more likely to want to be on the mailing list
- People who fish are more likely to want to be on the mailing list
- People who feel that bull trout are important are more likely to want to be on the mailing list
- People who are aware of the restoration process are more likely to want to be on the mailing list

LOCAL GROUP

All respondents were asked: "Would you like to participate in the bull trout restoration process through a local bull trout watershed group?" Only one out of five people -- 20% -- would like to participate through a local group.

The following significant patterns are found:

- 26% of the men would like to participate, as compared with 11% of the women
- People with incomes of \$40-60,000 are more likely to like to participate
- People who have lived in the state for less than 20 years are more likely to like to participate
- People who feel that bull trout are important are more likely to like to participate

DO YOU FISH

All respondents were asked: "Do you fish?" Most people -- 78% -- indicated that they fish.

The following significant patterns are found:

- 84% of the men fish, as compared with 69% of the women
- People in age group 35-44 are more likely to fish
- As income increases, so does the percentage who fish: 69% of the low income fish, as compared with 84% of the high income
- People who are aware of the restoration process are more likely to fish
- People who want to be on the mailing list are more likely to fish

SURVEY METHODS

Scope of Survey: Telephone survey of 158 people conducted for Montana Fish, Wildlife, and Parks.

Survey Dates: The survey was conducted on March 29-April 1, 1996.

Basic Procedures

- The phone numbers of the people interviewed in this survey were obtained from a list provided by Montana Fish, Wildlife, and Parks.
- All calls were placed between 5:00 PM and 9:30 PM local time.
- All calls were made from the telephone interviewing center of A & A Research, 690 Sunset Blvd., Kalispell, Montana. All interviewers were

directly supervised and randomly monitored. This is additional assurance of survey accuracy.

- The actual wording of each question is shown in the full-response data table.

Survey Accuracy: This survey has an overall allowed statistical variation of 8 percent.

About A & A Research: A & A Research is a professional marketing, advertising, and media research firm. Since 1978 A & A Research has been conducting marketing surveys and public opinion polls in markets throughout the United States and Canada.

A & A Research is a member of the **American Association for Public Opinion Research** and uses current scientific standards in conducting surveys.

A & A Research makes every effort to insure the highest quality research within the agreed specifications, budget, and time schedule. Market research, however, can predict consumer behavior and market conditions only at the time of the project, within the parameters of the project, and within the allowable statistical variation inherent to the research methods used. A & A Research, therefore does not warrant the viability of any actions taken nor assumes any responsibility for the success or failure of any actions subsequently taken.

Limitations: All scientific surveys are subject to certain limitations which should be taken into account when interpreting their findings:

1. The survey was limited to households with telephones. It is assumed that there is no significant difference in the patterns of telephone households and non-telephone households.
2. It is assumed that there is no significant difference in the patterns of people who participated in the survey and those who refused to participate.
3. It is assumed that there is no significant difference in patterns between those people who were available to be interviewed and those who were not.
