## **2005 ABSAROKA-BEARTOOTH MOUNTAIN LAKES GUIDE**

Fellow Angler:

This booklet is intended to pass on information collected over many years about the fishery of the Absaroka-Beartooth high country lakes. Since Pat Marcuson began surveying these lakes in 1967, many individuals have hefted a heavy pack and worked the high country for Fish, Wildlife and Parks. They have brought back the raw data and personal observations necessary to formulate management schemes for the 300+ lakes in this area containing fish. While the information presented here is not intended as a guide for hiking/camping or fishing techniques, it should help wilderness users to better plan their trips according to individual preferences and abilities.

The lake fisheries in the Beartooths generally fall into two categories: self-sustaining and stocked. Self-sustaining lakes have enough spawning habitat to allow fish to restock themselves year after year. These often contain so many fish that while fishing can be fast, the average size will be small. Average sizes and numbers of fish present change very little from year to year in most of these lakes.

Lakes without spawning potential must be planted regularly to sustain a fishery. Standard stocking in the Beartooths is 100 Yellowstone cutthroat fingerlings per acre every eight years. Special situations may call for different species, numbers, or frequency of plants. In the first few years after planting, many small fish will be found in a lake. With each passing year, fewer but larger fish will remain until all the fish age out and are gone, generally in 7-9 years. An angler can thus use the stocking history in this guide to predict what sizes and numbers of fish a given lake might currently contain.

Every year Fish, Wildlife and Parks survey crews sample 30+ lakes out of the 300+ lakes containing fish. The results of the last netting found in this report can be informative if looked at in the context of the stocking cycle for each lake. While this data won't provide up-to-the-minute information for anglers, it is sufficient to allow a good guess about what may be present at any given time. Still, these wilderness waters can hold surprises. I would appreciate any information you gather while on your trip (such as species, numbers, and accurate lengths). Reply to me at:

Montana Fish, Wildlife and Parks  
2300 Lake Elmo Drive  
Billings, MT 59105  
406-247-2940

## Codes Used in This Guide

### Fish Species

CT = Yellowstone cutthroat trout  
EB = Brook trout  
GR = Arctic grayling  
GT = Golden trout  
LL = Brown trout  
LT = Lake trout  
RB = Rainbow trout  
Hybrids are represented by RBXCT, CTXGT, etc.

### Abundance

R = Rare  
C = Common  
A = Abundant

### Status

SS = Self-sustaining  
ST = Stocked  
S+ = Stocked but with some natural reproduction

Miles = total number of miles to the lake from the trailhead

Trail ( ) = numbers of miles on an established trail

Marcusons Code = Code number of lake by drainage e.g., Rock Creek #60, East Rosebud #5, etc.

Crazy Mountain lake information can be found at the very end of this booklet.

As this guide will be updated yearly, the typeface has been much reduced to keep costs down. I trust the information contained here will be worth the extra eye strain or price of a magnifying glass to the user.

While this guide deals with mountain lakes, an angler would be wise not to overlook the many streams of the Beartooths.

Enjoy and respect the high country.

Good Fishing!

Michael W. Vaughn  
Fisheries Fieldworker

LAKE NAME: ABANDONED LAKE COUNTY: 10 T: 9S R: 17E SEC: 26CC  
DRAINAGE: CLARKS FORK ELEV: 10100 ACREAGE: 10.5 DEPTH: 25 FT

ACCESS: TRAIL 614/620 FROM ISLAND LAKE ON HWY 212. THE LAKE IS 7 MILES NORTH & WEST OF ISLAND LAKE. ELEVATION CHANGE 600'.

#### MARCUSONS CODE: 14

COMMENTS: THE TWIN LAKES SEEM TO FUNCTION MORE AS PART OF BIG TIMBER CREEK THAN AS LAKES. BOTH ARE NEARLY FILLED IN WITH SAND SIZED SEDIMENT AND HAVE A DISTINCT CHANNEL RUNNING THROUGH THEM.

CAMP SITES: FIREWOOD AVAILABLE. SHORELINE 10% TALUS, 65% TIMBER, 25% GRASS

YR. LAST GILLNETTED:: 1999

SURVEY FROM: 2009

SURVEY TO: 2014

PRIORITY: 3

#### SURVEY NOTES:

MUCH OF THE AREA AROUND THE LAKES SHOWS IMPACTS OF TRAMPLING BY LIVESTOCK. THIS AREA HAS A NATURALLY HIGH EROSION POTENTIAL AND THE LIVESTOCK HAVE CONTRIBUTED TO THE SEDIMENTATION OF THE STREAM AND LAKES. GOOD SPAWNING AREAS EXIST BETWEEN THE LAKES.

'90, '99 - NO SIGN OF THE GRAYLING PLANTED IN 1985, '91, '92.
